

## TASKS TO COMPLETE:

**Task 1:** From the homepage, navigate to movie and prod a user about a movie.

**Task 2:** From the homepage, navigate to profile and View and Manage prods from friends

**Task 3:** From the homepage, navigate to profile and View and Manage current watchlists

| Test Subjects:                   | Subject 1   | Subject 2   |
|----------------------------------|---|---|
| Age:                             | 20  | 20  |
| Gender                           | Male  | Male  |
| Major                            | Mechanical Engineer   | Computer Science  |
| Education                        | College Education   | College education   |
| <b>Time to complete task 1</b>   | 1m10s   | 1m6s  |
| Usability/Intuitiveness from 0-5 | 4   | 3   |
| Difficulties Completing Task     | None  | Prod is confusing   |
| <b>Time to complete task 2</b>   | 27s   | 1m2s  |
| Usability/Intuitiveness from 0-5 | 3   | 1   |
| Difficulties Completing Task     | No button to remove prod  | No Delete Button. Chatbox layout of prods confusing and initially did not think that the list of prods were recommendations from friends. Tried to navigate to watchlist to find prods                            |
| <b>Time to complete task 3</b>   | 14s   | 16s   |
| Usability/Intuitiveness from 0-5 | 3.5   | 4   |
| Difficulties Completing Task     | Did not recognize delete watchlist movie button.  | Red button a little vague   |
| Comments by Subject              | Does not understand what prod means. Thought received prods went under watchlist tab instead of Prod tab. Red buttons to delete watchlist movies confusing as user was colorblind                             | Too much whitespace on webpages. Main focus of prod page is not the movie, but the user.  |
| Feedback from user               | Prod is confusing. To Watch movies, when deleted from the To Watch list, should not be deleted completely. Rather, it should be moved to a "Watched" list, or greyed out, to show a history of watched movies | Rather than relying on headers on Prod, Watchlist etc. pages to tell you what information is on the page, it should be intuitive enough to know just by looking. Emphasis should be on the information, provided. |
